

# WHAT DO YOU WISH YOU HAD KNOWN ABOUT TEACHING?

November 8, 2007

2:00 PM - 5:00 PM

St. Pat's Ballroom A, Havener Center

Where can you go to get help preparing for your next teaching assignment? How can you learn if your teaching style is effective? What resources are available to help with teaching at UMR? Join us for a 90 minute workshop where we will discuss the answer to these questions as we explore the design process for successful teaching. Hear from **Dr. Margaret Gunderson**, Associate Director for MU's Education Technologies at Missouri (ET& MO), on how other instructors have used a design approach to overcome class problems and reach their teaching goals.

## Goals of the Workshop

- ◆ **Different Perspectives on Teaching and Learning** – take on the perceptions of different stakeholders in higher education and examine how they might prioritize teaching and learning issues.
- ◆ **Surviving and Thriving with Academic Transformation** – learn about how several academic transformation projects impacted classes at MU.
- ◆ **Best Practices for Academic Transformation** – based on the lessons-learned from various academic transformation projects, discuss the process and best practices for change in teaching and learning.
- ◆ **What Do You Wish You Had Known about Teaching** - identify instructional topics that are of most interest to UMR faculty and determine ways to encourage academic transformation in these areas.
