

WHEN IS GROUP WORK EFFECTIVE FOR LEARNING?

- ✓ **When more heads are better than one.**
- ✓ **When students who know, would learn from teaching others.**
- ✓ **When students who don't know, would learn more from their peers than their teacher.**
- ✓ **When a learning task requires more effort and time from a student than he/she can provide on their own.**
- ✓ **When students have different experiences, knowledge and skills that would contribute to their learning and the learning of others.**
- ✓ **When other methods of learning have failed.**
- ✓ **When repetition in another format will add to their learning.**
- ✓ **When a skill embodied in a group process can be experienced and learned.**
